Combine Multiple Types of Training

Build Quizzes & Create Training Content

Industrial-Strength Learning Management

Full-Featured Enterprise LMS

This is a learning management system made for the demands of industrial facilities. Produce practical, trackable results with this efficient, easy-to-use system, and administer your training program with impressive flexibility. Whether you operate a single site or large multi-site company, Enterprise LMS™ is designed to meet your needs.

Robust Tracking & Reporting

Track both computer-based and real-world training, including instructor-led and field testing. Workers digitally "sign" documents to acknowledge receipt and understanding. Use our library of over 35 pre-built reports to easily analyze training data and determine the compliance status of your workers.

Schedule & Automate Tasks

Reduce the time and cost involved in administering your training program by taking advantage of our scheduling and automation features. Workers get clear instruction on how to take required training and receive automatic notifications for upcoming classes and tests. Results are instantly generated and emailed.

Easily Manage Qualifications

Ensure your workers are qualified for their jobs. Create required courses and activities, and use these requirements to track worker qualifications at a single site or throughout your entire organization. Search the system for specific employees or qualifications, and print or email records on-demand to confirm competency.

Enterprise-Level Scalability

Convergence Enterprise LMS™ is designed to grow with you. Pilot the system at one site, and easily scale up over time to include your whole organization. Take advantage of our fast multimedia content servers which allow you to stream large SCORM courses, videos, and other high-bandwith training materials more efficiently.

Create & Import Training

Use our Import Wizard to easily import training content in standard SCORM or AICC formats. Combine your imported training with quizzes, tests, and tasklists created with the Enterprise LMS™ multimedia Quiz Builder, and include images or videos to enhance interactivity.
