MOBILE™

Training Unplugged.

Tablet-based Mobile Training

Scan Barcodes for Machine-specific Instruction

Instructor Sign-off for Field-Based Tasks

The Future of Field Training

Convergence Mobile is an essential on-the-job training tool, putting information in the hands of workers in the field, and decreasing downtime and production expenses by making it easier to train workers in their work environment. Cut the cost of training while at the same time making it more effective.

Instant Performance Support

Use the tablet's built-in barcode scanner to view a list of any training activity or reference material related to a machine or work area and then view that material instantly. Access step-by-step instruction and repair manuals immediately to reduce downtime. Get access to the training material you need when you need it most.

Full PC Functionality

Convergence Mobile isn't just a learning device; it provides you with a modern, wi-fi-enabled, touch-screen PC running Windows 7. If you can do it on a laptop, you can do it on a tablet. Send emails, write notes, update spreadsheets, and surf the internet.

OJT Performance Evaluations

On-the-job training will always be a valuable component of employee training. Supervisors can check off worker tasklists in the field, make notes on worker performance, and digitally sign-off to verify completion of training. Back at the office, the data syncs automatically with Convergence LMS.

Automate Field-Based Training

Create training activities that ask employees to identify machines, machine components, or work areas. Then let the employee take the Convergence Mobile tablet in the field and use the built-in barcode scanner to complete the identifications. Save money by freeing up supervisors for critical tasks.

Flexible Hardware Options

Convergence Mobile can run on any Windows-based tablet. From rugged, shock-proof workhorses, to slim, lightweight portables, run Mobile on the hardware most appropriate for the job.
